Acute toxicity, Oral : Out of category

Acute toxicity, Dermal : Not possible to classify because of insufficient data

Inhalation (gas) : Not possible to classify because of insufficient data

Inhalation (dust, mist) : Not possible to classify because of insufficient data
(as Sodium sulfite)
Rat oral LD50=3560mg/kg

Skin corrosiveness : Out of category

Irritation to skin, eyes : Causes serious eyes irritation.(Category 2B)

Since cause moderate irritation to the eyes of rabbit, it was classified into category 2B.

Respiratory sensitization or skin sensitization

Respiratory sensitization : Not possible to classify because of insufficient data

Skin sensitization : Not possible to classify because of insufficient data

Mutagenicity : Out of category

Carcinogenic effects : Not possible to classify because of insufficient data

Effects on the reproductive system

: Not possible to classify because of insufficient data

Specific target organ systemic toxicity(Single exposure)

: Not possible to classify because of insufficient data

Sulfite salt is oxidized and is converted to sulfate ion inside bodies, but digestive organs are irritated because of isolated sulfite ion. If human swallowed 4g of the substance, they have poisoning digestive organs. However, it is not possible to classify because of insufficient data.

Specific target organ systemic toxicity(repeated exposure)

: Not possible to classify because of insufficient data

Aspiration hazard

: Not possible to classify because of insufficient data

Inhalation studies of sulfuric acid of rabbits and mice during the period of embryo organogenesis, the dose that does not recognized toxicity on dams appears no embryo toxicity and tetraagenicity on both species. As the main toxicity is direct irritation and corrosion on the local tissue, there is no concern of reproductive toxicity.
